Abstract

This file represents a template \LaTeX source to be used for preparing of *abstracts* for the International Workshop “Shapes and Dynamics of Atomic Nuclei: Contemporary Aspects” (SDANCA-23). It should be compiled by using the file HERON.CLS (available in the same directory). This style belongs to the Heron Press Science Series Books (HPSS). Please mind the comment regarding the case of a single affiliation (commented lines after the affiliations lines). References [1, 2] and [3] demonstrate how to cite the relevant literature. To get the output PDF please use PDFLATEX command or LATEX plus DVIPDF. We plan to collect all abstracts into a booklet and make it available during the Workshop. Note that the SDANCA-23 *contribution papers* will need to be prepared in a different style since they will be considered for publication in Physica Scripta. The relevant information will be distributed additionally.
